PARTNERSHIP TO IMPROVE DEMENTIA CARE IN NURSING HOMES
Provider Implementation Flow Diagram

1. Engage leadership team (DON, administrator, medical director, consultant pharmacist)
2. Leadership team meets with direct care staff to conduct facility self-assessment and establish goals (Use Facility Question Sheet)
3. Leadership team and direct care staff develop plan (including trainings) to address dementia care. (Review transformative model for change)
4. Conduct exercises on behavior and attitude to engage staff; make the case for why change is needed
5. Review data on rates of antipsychotic use in the facility
6. Identify strengths and weaknesses (specific residents, units; facility-wide trends) based on the data
7. Determine which residents might benefit from a GDR trial and implement those plans
8. Establish ongoing meetings, rounds or other means of continuous staff engagement at all levels on individualized approaches to care
9. Set up data tracking sheet and assign lead staff to track and trend data and process for review
10. Follow up with State partners to share challenges, successes, resources
